DESCRIPTION

This TOTALPAC®3 integrated fire protection system by FireFlex Systems Inc. consists of an integrated wet type sprinkler riser assembly with excess pressure pump, totally pre-assembled, pre-wired and factory tested. All electrical and mechanical components of the system are contained in one single unit.

Standard wet Pipe systems are built around the Viking trim Alarm Check Valve Model J-1. The valves are rated up to a maximum of 250 psi WWP (1724 kPa) max and are available in the following diameters:

- 3” (100 mm)
- 4” (100 mm)
- 6” (150 mm)
- 8” (200 mm)

Standard features

- cULus Listed as an assembled unit
- cULus Listed & FM Approved parts
- Factory assembled, programmed and tested under ISO-9001 standards
- Prewired to a terminal block
- Easy and compact installation
- Viking conventional trim rated at 250 psi (1724 kPa)
- Galvanized trim piping
- Serial number for easy reference
- Corrosion resistant cabinet with flush type handle and lock
- No open drain cup inside the unit
- numerous modular options to meet the most demanding jobsite requirements
- User-friendly standardized operation & installation manual
- Free interactive simulator
**Cabinet**

The **TotalPac®3** cabinets are made of sturdy 14 gauge steel, they are available in two (2) sizes; 
- 36" x 25" x 77" (91.4 x 63.5 x 195.6 cm) for 3" & 4" systems
- 46" x 25" x 77" (116.8 x 63.5 x 195.6 cm) for 6" systems
- 54" x 31" x 81" (137.2 x 78.7 x 205.7 cm) for 8" systems

All surfaces are rust proof coated, inside and outside, with fire red, oven baked polyester powder on phosphate base. Cabinet is provided with one or two doors, all provided with a neoprene gasket to absorb vibrations.

A field wiring electrical junction boxes is integrated with the cabinet for connection of all electrical components in the trim. Pressure switches, supervisory switches, etc. are all factory wired to a terminal strip (TBA) for contractor's field wiring.

Gauges to indicate air, water supply pressure and priming water pressure are all visible through clear Lexan windows.

**IMPORTANT:** **TotalPac®3** units are NOT designed to be installed where they will be subjected to outdoors and/or freezing conditions. Refer to environmental data for additional details. Subjecting the unit to conditions outside these limitations might tamper the normal operation of the system.

Cabinet doors are provided with hinges that can easily be disassembled on site to remove the door assemblies for servicing. The cabinet assembly is pre-assembled, pre-wired, and factory tested under ISO-9001 conditions.

Multiple unit installations are easily achieved by manifolding units together at their water inlets but drains shall remain separate and open.

**Sequence of operation (see trim diagram)**

In a fire condition, the activation of at least one automatic sprinkler head is necessary to cause the water discharge. The activation of at least one automatic sprinkler head will trip the wet pipe valve and cause the system to spray through all open sprinklers. This will activate alarm and water flow switch contacts connected to the building fire alarm panel and sound an alarm.

**Systems hydraulic limitations**

**WARNING** The information contained herewith is for estimation and evaluation purposes only. Its use remains the responsibility of the designer. Designers should refer to the appropriate NFPA Standards and any other applicable codes for their final design. Also refer to FireFlex Systems Inc. appropriate user manuals and to manufacturer's data sheets for additional details.

Systems limitations indicated below are nominal flow limitations.

**Standard equipment**

**Alarm check valve**

The Viking Model J-1 Alarm Check Valve serves as a check valve by trapping pressurized water above the clapper and preventing reverse flow from sprinkler piping. The valve is designed to initiate an alarm during a sustained flow of water (such as the flow required by an open sprinkler) by operating an optional water motor alarm and/or alarm pressure switch. The valve is made suitable for use on variable pressure water supplies by adding the optional retard chamber to the standard trim.

**Water supply control valve**

The water inlet control valve is a supervised, indicating butterfly valve. Purpose of this valve is to manually shutoff the preaction system.

**Excess pressure pump**

The primary purpose of the Excess Pump is to prevent false alarms due to surges or increases in pressure in the water mains. The Excess Pressure pump introduces pressure on the system side of the alarm check valve and thereby keeps the alarm check valve in a closed position even when surges occur which might otherwise cause a false alarm. For automatic operation, a differential pressure switch is used to turn the pump on or off which should be set to a minimum pressure difference of 30 psi pressure above the valve. When activated, it should be set to increase this pressure to a maximum difference of 45 psi pressure above the valve. The pressure switch should be connected to a point above the clapper of the alarm check valve.

**Alarm pressure switch**

The alarm pressure switch monitors the water flow within the sprinkler piping. Should the Alarm check valve clapper opens to allow water to flow into the sprinkler piping. The alarm pressure switch will activate, indicating a water flow signal.
Optional mechanical equipment

- Semi and full flanged option
  When required by the user, TOTALPAC®3 units can be provided in either a semi-flanged or full flanged configuration.
  The semi flanged option provides flanged fittings only on the water inlet pipe (side needs to be specified at the time of order) and on the system riser outlet. The drain manifold is then provided with a threaded end that also needs to have its side specified (left or right). The rest of the fittings are the same as usual with the main components being provided in the standard grooved-grooved configuration.
  The full flanged option is the same as above but goes a step further with the main components being also provided with a flanged-flanged configuration.
  When provided, the face of the flanges will always be situated 6 inches from the outside face of the mounting base or cabinet surface.

- Fire department connection option
  The fire department connection option consists of a grooved tee fitting installed at the outlet of the Alarm check valve (A1). An access hole of the proper diameter is factory pre-drilled on the side of the TOTALPAC®3 enclosures for connection of the piping going to the fire department connection.

  **Note:** The fire department connection hardware itself (drain, Siamese, etc.) is NOT provided with this option and shall be provided by the installing contractor. Refer to NFPA-13 Standard for additional information about the equipment layout and installation.

  **Warning:** Fire department connection is **not available** on 8" systems.
Details & field wiring diagrams

Cabinet with main components

- Cable Entry
- Junction box
- TBA & TBB
- Riser Outlet to Sprinklers Network
- Alarm Valve
- Water Supply Control Valve
- Drain Outlet (either side)
- Water Inlet (either side)
Trim diagram

Trim Components:

A1  Alarm valve
B3  7/32" Restricted orifice
B5  Alarm test valve
B6  Alarm shut-off valve
B7  Isolation valve
B8  ¼ Relief valve
B9  ½" Swing check valve
B10 Pump pressure switch
B11 Low water pressure switch
B12 Water supply pressure gauge & valve - Supply
B13 Water pressure gauge & valve - System
B14 Excess pressure pump
B15 1/8" Restricted orifice
C1  Alarm pressure switch
C2  Connection to water motor gong (strainer supplied by contractor)
C3  Hydraulic alarm cut-off valve
D1  Water supply control valve
D3  Main drain valve
TotalPac®3
Wet pipe system

Field wiring diagrams:

WIRING OF INPUT POWER SOURCE

- 120VAC, 60Hz
- 220VAC, 50Hz

NOTES:
- All devices are factory wired.
- All devices are shown in their normal supervisory state.
- Contacts are rated:
  - Pressure switches: 2A, 30VDC 10A, 125/250VAC
  - Supervisory switches: 0.5A, 125VDC 0.25A, 250VDC 5A, 1/6HP, 125/250VAC
- Use dry contacts with power limited circuits only.
- EOL devices (not included) must be compatible with the release control panel used.

Refer to Local Electrical Codes for wiring size.
