TOTALPAC®3
Integrated Fire Protection Systems

COMPACT AND AESTHETIC
THE TOTALPAC®3 SETS THE BAR FOR MODERN FIRE PROTECTION APPLICATIONS

FEATURES
- cULus Listed & FM Approved as an assembled unit
- modular Viking conventional trim rated at 250 psi
- galvanized trim piping
- factory assembled, programmed and tested under ISO-9001 standards
- serial number for easy reference
- corrosion resistant cabinet with flush type handle and lock
- all internal components are fully accessible from the front of the cabinet
- no open drain cup inside the unit
- self-contained unit prewired to the Viking VFR-400 releasing control panel
- failsafe preaction type with a Surefire® trim
- multicycle units using Firecycle® III technology
- numerous modular options to meet the most demanding jobsite requirements
- 4 styles of modular air supply options
- inlet & outlet hydrostatic test ports
- user-friendly standardized operation & installation manual
- compact cabinet design / small footprint
- uses Viking Model F-1 Straight Through Deluge valve
- available up to 8” systems
- larger compressor available up to 8” systems (up to 2 HP)
- removable knockouts provided for electrical conduit connections (no drilling required in cabinet)
TOTALPAC®3 UNITS ARE AVAILABLE IN THE FOLLOWING SYSTEM TYPES:

**PREACTION**
- non-interlocked with pneumatic or electric release
- single interlocked with pneumatic or electric release
- double interlocked with pneumatic-pneumatic, electric-pneumatic or electric-pneumatic release

**SUREFIRE®**
- failsafe single or double interlocked preaction system

**MULTICYCLE**
- Firecycle® III single or double interlocked preaction
- Firecycle® III deluge
- Firecycle® III wet

**DELUGE**
- with hydraulic, pneumatic or electric release

**DRY PIPE**
- available in standard 175 psi or HP 250 psi

**WET PIPE**
- available with retard chamber or excess pressure pump

---

**MODULAR ENCLOSURES**

Remote-controlled unit: is provided with a junction box atop the sprinkler trim enclosure where all internal devices are prewired to a sturdy set of terminals for field wiring to a releasing control panel to be provided by others.

Self-contained unit: is a complete system with a prewired releasing control panel installed in an enclosure atop the sprinkler trim enclosure.

**MODULAR RELEASE TRIM**

Units are built from subassemblies using quality pipe unions making servicing any part quick and simple. Operating instructions indicated on all valve handles and devices make operation safe and easy to comprehend.

**SYSTEM OPTIONS**

- The riser shut-off valve option: consist of a supervised butterfly valve which allows for a full flow trip test without flooding the system’s piping and a sight glass located on the main drain for visual indication of the water flow.
- Fire department connection (available only on the right side of the cabinet).
- Semi-flanged option: flanged inlet and riser connections, threaded drain.
- Anti-column device: to allow automatic draining of water column.
- Seismic option: OSHPD pre approved construction using specific components.

**SEISMIC OPTION**

The TOTALPAC®3 seismic option is OSHPD pre-approved under OSP-0341-10 up to a $S_{ud}(g)$ of 2.22, and available with or without control panel.

**QUALIFICATIONS**

The TOTALPAC®3 seismic option construction is qualified in accordance with:

- ICC-ES AC-156, 2010 Edition

Seismic testing is for equipment being installed above the grade of the building structure, including roof top; with a maximum calculated $S_{ud}$ of 2.212 for Soil Class D. Following seismic testing, a visual evaluation and functional testing was repeated on the seismic test items to verify their integrity and operability.

---

RISER SHUT-OFF VALVE OPTION

SEISMIC OPTION

QUALIFICATIONS
AIR SUPPLY FOR CABINETS

The automatic sprinkler piping is supervised by compressed air from a source installed inside or outside the cabinet. The air supply must be regulated. When the compressor option is selected (air supply style “A”), the motor must be sized to restore normal system air pressure within 30 minutes as per NFPA 13 requirements.

1. Air supply style “A”: is used to supervise the sprinkler piping network of dry or preaction systems. This option includes an oilless piston-type air compressor with supervisory trim integrated in the TOTALPAC®3 cabinet and factory piped to the system riser.

Air compressors have open, single-phase motors with internal thermal protection.

2. Air supply style “B”: is provided with an air pressure maintenance device factory mounted and adjusted in the TOTALPAC®3 cabinet and piped to the air inlet port of the unit. Used to supervise and restrict the air supply of the sprinkler piping network of dry or preaction sprinkler systems when the external air supply (by tank-mounted air compressor, plant air or dry nitrogen cylinders) is provided by others.

Note: the air supply must be restricted to ensure that it cannot replace air as fast as it escapes when a releasing device or sprinkler operates.

3. Air supply style “C”: is provided with an air pressure maintenance device factory mounted in the TOTALPAC®3 cabinet. Used only for the pilot line of a pneumatically operated system.

4. Air supply style “D”: is provided with an air supervisory switch and shut-off trim. Used for freezer application with external air supply and regulation.

RELEASING CONTROL PANEL

The Viking VFR-400 is cULus Listed, FM Approved and meets UL 864-9 requirements. It features onboard menu-driven programming with twelve pre-installed programs to facilitate set up. The panel is compatible with multiple initiating devices such as: linear heat detection, smoke and heat detectors, waterflow indicators, low & high air pressure switches as well as manual pull stations.

RELEASING CIRCUIT DISCONNECT SWITCH

Required by NFPA 72 - 2010 Edition, this feature is standard on all our TOTALPAC®3 units and prevents accidental discharge during maintenance or inspection. Operation of the key switch physically disconnects the release circuit wiring and causes a trouble signal at the releasing control panel.
